

# Windows Protocols Errata

---

This topic lists the Errata found in the Windows Protocols Technical Specifications, Overview Documents, and Reference documents since they were last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

Errata are content issues in published versions of protocols documents that could impact an **implementation**. Examples of errata are errors or missing information in the normative sections of the Technical Specifications or in the use cases (examples) in the Technical Specifications and Overview Documents.

Content issues that don't impact an implementation, for example, editorial updates due to typos, formatting updates, and rewrites for readability and clarity, are **not** included in Errata.

The sections below list the Windows Protocols documents that contain active Errata (i.e., Errata not yet released with the documents on [Docs.Microsoft.Com](https://docs.microsoft.com) [DMC]) and provide links to archived Errata (i.e., Errata already released with the documents on DMC).

## Protocols Documents with Active Errata

## [MC-DTCXA]: MSDTC Connection Manager OleTx XA Protocol

**This topic lists the Errata found in [MC-DTCXA] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 1, 2017 - [Download](#)

## [MC-NBFX]: .NET Binary Format XML Data Structure

This topic lists the Errata found in [MC-NBFX] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document.

December 1, 2019 – [Download](#)

## [MC-NMF]: .NET Message Framing Protocol

This topic lists the Errata found in the MC-NMF document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

Errata below are for Protocol Document Version [V9.0 - 2018/03/16](#).

Errata Published*	Description
2018/07/02	<p>In Section 2.2.6, Preamble Message, the field descriptions have been modified as follows and have been moved to follow the packet diagram.</p> <p>Changed from:</p> <p>The VersionRecord MUST be formatted as specified in section 2.2.3.1. The ModeRecord MUST be formatted as specified in section 2.2.3.2. The ViaRecord MUST be formatted as specified in section 2.2.3.3. The EnvelopeEncodingRecord MUST be formatted as specified in section 2.2.3.4</p> <p>Changed to:</p> <p>VersionRecord (3 bytes): This field MUST be formatted as specified in section 2.2.3.1. ModeRecord (2 bytes): This field MUST be formatted as specified in section 2.2.3.2. ViaRecord (variable): This field MUST be formatted as specified in section 2.2.3.3. EnvelopeEncodingRecord (variable): This field MUST be formatted as specified in section 2.2.3.4</p>

\*Date format: YYYY/MM/DD

## [MC-PRCR]: Peer Channel Custom Resolver Protocol

**This topic lists the Errata found in [MC-PRCR] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

September 15, 2017 - [Download](#)

## [MS-ABTP]: Automatic Bluetooth Pairing Protocol

This topic lists the Errata found in [MS-ABTP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

## [MS-ADA2]: Active Directory Schema Attributes M

This topic lists the Errata found in the MS-ADA2 document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

July 18, 2016 - [Download](#)

June 1, 2017 - [Download](#)

## [MS-ADA3]: Active Directory Schema Attributes N-Z

**This topic lists the Errata found in the MS-ADA3 document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 1, 2017 - [Download](#)

## [MS-ADDM]: Active Directory Web Services: Data Model and Common Elements

This topic lists the Errata found in [MS-ADDM] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-ADFSOAL]: Active Directory Federation Services OAuth Authorization Code Lookup Protocol

This topic lists the Errata found in [MS-ADFSOAL] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

## [MS-ADFSPiP]: Active Directory Federation Services and Proxy Integration Protocol

This topic lists the Errata found in the MS-ADFSPiP document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 30, 2015 - [Download](#)

July 18, 2016 - [Download](#)

September 15, 2017 - [Download](#)

September 12, 2018 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-ADFSWAP]: Active Directory Federation Service (AD FS) Web Agent Protocol

This topic lists the Errata found in [MS-ADFSWAP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-ADLS]: Active Directory Lightweight Directory Services Schema

**This topic lists the Errata found in the MS-ADLS document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 1, 2017 - [Download](#)

## [MS-ADSC]: Active Directory Schema Classes

This topic lists the Errata found in the MS-ADSC document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

Errata below are for Protocol Document Version [V23.0 - 2018/03/16](#).

Errata Published*	Description
2019/09/16	<p>In Section 2.243, Class samDomain, changed from:</p> <p>(OA; CIOI; RPWP; 3f78c3e5-f79a-46bd-a0b8-9d18116ddc79;; PS) S: (AU; SA; WDWOWP;;; WD) (AU; SA; CR;;; BA) (AU; SA; CR;;; DU)</p> <p>Changed to:</p> <p>(OA; CIOI; RPWP; 3f78c3e5-f79a-46bd-a0b8-9d18116ddc79;; PS) (OA; CIIO; SW; 9b026da6-0d3c-465c-8bee-5199d7165cba; bf967a86-0de6-11d0-a285-00aa003049e2; PS) (OA; CIIO; SW; 9b026da6-0d3c-465c-8bee-5199d7165cba; bf967a86-0de6-11d0-a285-00aa003049e2; CO) S: (AU; SA; WDWOWP;;; WD) (AU; SA; CR;;; BA) (AU; SA; CR;;; DU)</p>

June 30, 2015 - [Download](#)

Errata below are for Protocol Document Version [V24.0 - 2021/06/25](#).

Errata Published*	Description
2022/01/11	<p>The following sections were changed. Please see the <a href="#">diff document</a> for the details.</p> <p>In Section 3.2.4.1 Performing Client-Side Wrapping of Secrets, Product Behavior Note&lt;18&gt;</p> <p>Description: Revised to disable the data protection API master key backup fallback by default, as the use of the RC4 algorithm to back up the data protection API master key is no longer available by default.</p> <p>Changed from:</p> <p>Windows XP operating system and later and Windows Server 2003 operating system and later fall back to server-side wrapping using BACKUPKEY_BACKUP_GUID when they fail to retrieve the server's public key using BACKUPKEY_RETRIEVE_BACKUP_KEY_GUID.</p> <p>In addition, as noted earlier, Windows clients always retry failing operations once. The resulting process is as follows: The client first tries the BACKUPKEY_RETRIEVE_BACKUP_KEY_GUID operation and, if it fails, performs DC rediscovery and retries the same operation. If the retry fails, the client tries a BACKUPKEY_BACKUP_GUID operation. If this fails, the client performs DC rediscovery again and retries the BACKUPKEY_BACKUP_GUID operation. If this also fails, an error is returned to the caller.</p> <p>Changed to:</p> <p>The process of falling back to server-side wrapping using the BACKUPKEY_BACKUP_GUID when retrieval of the server's public key fails using the BACKUPKEY_RETRIEVE_BACKUP_KEY_GUID is no longer available by default for the operating systems specified in <a href="#">[MSFT-CVE-2022-21925]</a>. However, the fall back can be enabled by adding a registry key designed for this purpose.</p> <p>In addition, as noted earlier, Windows clients always retry failing operations once. The resulting process is as follows: The client first tries the BACKUPKEY_RETRIEVE_BACKUP_KEY_GUID operation, and if it fails, the client performs DC rediscovery and retries the same operation. If the retry fails, the client tries a BACKUPKEY_BACKUP_GUID operation. If this fails, the client performs DC rediscovery again and retries the BACKUPKEY_BACKUP_GUID operation. If this also fails, an error is returned to the caller.</p>

## [MS-BKUP]: Microsoft NT Backup File Structure

**This topic lists the Errata found in the MS-BKUP document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

Errata below are for Protocol Document Version [V7.0 - 2022/10/03](#).

Errata Published*	Description
2023/01/30	<p>In Section 2.2.2.1.1, "Common Header," changed "inner buffer" to "Payload field" in the descriptions of deserialization.</p> <p>Changed from:</p> <p>Message deserialization is split into two phases. The first phase consists of parsing the header, validating authenticity, deduping, and decryption. The inner buffer is sent to the owner to manage the second part of the deserialization.</p> <p>Changed to:</p> <p>Message deserialization is split into two phases. The first phase consists of parsing the header, validating authenticity, deduping, and decryption. The Payload field is sent to the owner to manage the second part of the deserialization.</p> <p>Changed from:</p> <p>Message deserialization will therefore be split into two phases. With the first phase consisting of the parsing header, validating authenticity, deduping, and decryption. The inner buffer will be passed up to the owner to manage the second part of the deserialization.</p> <p>Changed to:</p> <p>Message deserialization will therefore be split into two phases. With the first phase consisting of the parsing header, validating authenticity, deduping, and decryption. The Payload field will be passed up to the owner to manage the second part of the deserialization.</p>

Errata below are for Protocol Document Version [36.0 - 2022/04/29](#).

Errata Published*	Description
2022/08/09	<p>In section 2.1.5.15.11, FileRenameInformation, revised renaming processing.</p> <p>Changed from:</p> <ul style="list-style-type: none"><li>▪ If <i>RemoveSourceLink</i> is TRUE:<ul style="list-style-type: none"><li>▪ If <b>Open.File.FileType</b> is DirectoryFile<ul style="list-style-type: none"><li>▪ <i>FilterMatch</i> = FILE_NOTIFY_CHANGE_DIR_NAME</li></ul></li><li>▪ Else<ul style="list-style-type: none"><li>▪ <i>FilterMatch</i> = FILE_NOTIFY_CHANGE_FILE_NAME</li></ul></li></ul></li><li>▪ EndIf</li><li>▪ If <i>MoveToNewDir</i> is TRUE or <i>AddTargetLink</i> is FALSE or <i>RemoveTargetLink</i> and <i>ExactCaseMatch</i> are TRUE: <i>Action</i> = FILE_ACTION_REMOVED</li><li>▪ Else<ul style="list-style-type: none"><li>▪ <i>Action</i> = FILE_ACTION_REMOVED_OLD_NAME</li></ul></li><li>▪ EndIf</li></ul> <p>Changed to:</p>

Errata Published*	Description
	<ul style="list-style-type: none"> <li>▪ If <i>RemoveSourceLink</i> is TRUE: <ul style="list-style-type: none"> <li>▪ If <b>Open.File.FileType</b> is DirectoryFile <ul style="list-style-type: none"> <li>▪ <i>FilterMatch</i> = FILE_NOTIFY_CHANGE_DIR_NAME</li> </ul> </li> <li>▪ Else <ul style="list-style-type: none"> <li>▪ <i>FilterMatch</i> = FILE_NOTIFY_CHANGE_FILE_NAME</li> </ul> </li> </ul> </li> <li>▪ EndIf</li> <li>▪ If <i>MoveToNewDir</i> is TRUE or <i>AddTargetLink</i> is FALSE or <i>RemoveTargetLink</i> and <i>ExactCaseMatch</i> are TRUE: <i>Action</i> = FILE_ACTION_REMOVED</li> <li>▪ Else <ul style="list-style-type: none"> <li>▪ <i>Action</i> = FILE_ACTION_RENAMED_OLD_NAME</li> </ul> </li> <li>▪ EndIf</li> </ul>
2022/07/26	Added revisions to section 2.1.5.2, Server Requests an Open of a Named Pipe. Please see the <a href="#">diff file</a> .
2022/06/01	Added new section, 2.1.5.2, Server Requests an Open of a Named Pipe. Please see the <a href="#">diff file</a> .
2022/06/01	<p>In section 2.1.5.15.11, FileRenameInformation, added information about how NTFS prevents a race condition during renaming.</p> <p>Changed from:</p> <p>If Open.File contains open files as specified in section 2.1.4.2, the operation MUST be failed with STATUS_ACCESS_DENIED.</p> <p>Changed to:</p> <p>If Open.File contains open files as specified in section 2.1.4.2, the operation MUST be failed with STATUS_ACCESS_DENIED.&lt;174&gt;</p> <p>&lt;174&gt; On Windows NTFS, NTFS checks for open files beneath the directory being renamed (performs section 2.1.4.2), it records the count of open files. If there is a lease to break, NTFS requests the break and then goes back to the start of performing 2.1.5.15.11. NTFS waits for the lease break acknowledgment and restarts the rename operation. When NTFS performs section 2.1.4.2 again, it again records how many open files there are beneath the directory and compares that to the previous count. If the current count is greater than or equal to the previous count, NTFS fails the rename and prevents a possible race condition.</p>
2022/05/27	<p>In section 2.1.5.10.34, FSCTL_SET_INTEGRITY_INFORMATION_EX, updated list of applicable updates.</p> <p>Changed from:</p> <p>&lt;127&gt; Section 2.1.5.10.34: The FSCTL_SET_INTEGRITY_INFORMATION_EX operation is supported only by the ReFS file system v3.2 or higher (Windows 10 v1507 operating system or higher). FSCTL_SET_INTEGRITY_INFORMATION_EX is handled following the process in this section on systems updated with <a href="#">[MSKB-5014019]</a>, <a href="#">[MSKB-5014021]</a>, <a href="#">[MSKB-5014022]</a>, or <a href="#">[MSKB-5014023]</a>.</p> <p>Changed to:</p> <p>&lt;127&gt; Section 2.1.5.10.34: The FSCTL_SET_INTEGRITY_INFORMATION_EX operation is supported only by the ReFS file system v3.2 or higher (Windows 10 v1507 operating system or higher). FSCTL_SET_INTEGRITY_INFORMATION_EX is handled following the process in this section on systems updated with <a href="#">[MSKB-5014019]</a>, <a href="#">[MSKB-5014021]</a>, <a href="#">[MSKB-5014022]</a>, <a href="#">[MSKB-5014023]</a>, <a href="#">[MSKB-5014701]</a>, <a href="#">[MSKB-5014702]</a>, or <a href="#">[MSKB-5014710]</a>.</p>
2022/05/18	<p>The following sections were changed. Please see the <a href="#">diff document</a> for the details.</p> <p>In Section 2.1.1.3, Per File, updated a product behavior about how registry entries affect the handling of LastAccessTime:</p> <p>Changed from:</p> <p>&lt;17&gt; Section 2.1.1.3: In Windows Vista and subsequent, LastAccessTime updates are disabled by default in the ReFS and NTFS file systems. It is only updated when the file is closed. This behavior is controlled by the following registry key: HKLM\System\CurrentControlSet\Control\FileSystem\NtfsDisableLastAccessUpdate. A nonzero value means LastAccessTime updates are disabled. A value of zero means they are enabled.</p> <p>Changed to:</p>

Errata Published*	Description								
	<p>&lt;17&gt; Section 2.1.1.3: In Windows Vista and subsequent, LastAccessTime updates are disabled by default in the ReFS and NTFS file systems. It is only updated when the file is closed. This behavior is controlled by the following registry values (respectively): HKLM\System\CurrentControlSet\Control\FileSystem\RefsDisableLastAccessUpdate, and HKLM\System\CurrentControlSet\Control\FileSystem\NtfsDisableLastAccessUpdate. A value of 1 means LastAccessTime updates are disabled. Any other value (or undefined) means they are enabled.</p> <p>In Windows 10 v1803 operating system and subsequent, NTFS has two registry values controlling LastAccessTime updates: HKLM\System\CurrentControlSet\Control\FileSystem\NtfsDisableLastAccessUpdate and HKLM\System\CurrentControlSet\Control\FileSystem\NtfsLastAccessUpdatePolicyVolumeSizeThreshold. The NtfsDisableLastAccessUpdate value is now treated as a bitfield as follows:</p> <table border="1" data-bbox="383 636 1429 1503"> <thead> <tr> <th data-bbox="383 636 781 688">Value</th> <th data-bbox="781 636 1429 688">Meaning</th> </tr> </thead> <tbody> <tr> <td data-bbox="383 688 781 741">0x00000001</td> <td data-bbox="781 688 1429 741">Disable LastAccessTime updates.</td> </tr> <tr> <td data-bbox="383 741 781 1350">0x00000002</td> <td data-bbox="781 741 1429 1350"> <p>System managed. Indicates that NTFS uses its own policy for updating LastAccessTime as follows:</p> <p>On client systems, LastAccessTime updates are enabled if any of the following conditions are true:</p> <ul style="list-style-type: none"> <li>• NtfsLastAccessUpdatePolicyVolumeSizeThreshold is 0.</li> <li>• The size of the boot volume is &lt;= NtfsLastAccessUpdatePolicyVolumeSizeThreshold in GB.</li> <li>• NtfsLastAccessUpdatePolicyVolumeSizeThreshold is undefined and (prior to Windows 10 v2004) the size of the boot volume is &lt;= 128GB.</li> </ul> <p>On server systems, or client systems where the above conditions do not apply, LastAccessTime updates are always disabled.</p> <p>At system startup, after evaluating the above policy, NTFS will set/clear flag 0x00000001 accordingly to reflect that LastAccessTime updates are disabled/enabled.</p> </td> </tr> <tr> <td data-bbox="383 1350 781 1503">0x80000000</td> <td data-bbox="781 1350 1429 1503">Flags initialized. Indicates NTFS recognizes flags other than 0x00000001. At system startup, if flag 0x80000000 is not set, the system will automatically set flag 0x80000000 and will additionally set flag 0x00000002 (becoming system managed) if flag 0x00000001 was set.</td> </tr> </tbody> </table> <p>If the value of NtfsDisableLastAccessUpdate is controlled by group policy, then only flag 0x00000001 is recognized.</p> <p>In Section 2.1.1.4, Per Link, updated a product behavior about how registry entries affect the handling of LastAccessTime:</p> <p>Changed from:</p> <p>&lt;31&gt; Section 2.1.1.4: In Windows Vista and subsequent LastAccessTime updates are disabled by default in the ReFS and NTFS file systems. It is only updated when the file is closed. This behavior is controlled by the following registry key:</p>	Value	Meaning	0x00000001	Disable LastAccessTime updates.	0x00000002	<p>System managed. Indicates that NTFS uses its own policy for updating LastAccessTime as follows:</p> <p>On client systems, LastAccessTime updates are enabled if any of the following conditions are true:</p> <ul style="list-style-type: none"> <li>• NtfsLastAccessUpdatePolicyVolumeSizeThreshold is 0.</li> <li>• The size of the boot volume is &lt;= NtfsLastAccessUpdatePolicyVolumeSizeThreshold in GB.</li> <li>• NtfsLastAccessUpdatePolicyVolumeSizeThreshold is undefined and (prior to Windows 10 v2004) the size of the boot volume is &lt;= 128GB.</li> </ul> <p>On server systems, or client systems where the above conditions do not apply, LastAccessTime updates are always disabled.</p> <p>At system startup, after evaluating the above policy, NTFS will set/clear flag 0x00000001 accordingly to reflect that LastAccessTime updates are disabled/enabled.</p>	0x80000000	Flags initialized. Indicates NTFS recognizes flags other than 0x00000001. At system startup, if flag 0x80000000 is not set, the system will automatically set flag 0x80000000 and will additionally set flag 0x00000002 (becoming system managed) if flag 0x00000001 was set.
Value	Meaning								
0x00000001	Disable LastAccessTime updates.								
0x00000002	<p>System managed. Indicates that NTFS uses its own policy for updating LastAccessTime as follows:</p> <p>On client systems, LastAccessTime updates are enabled if any of the following conditions are true:</p> <ul style="list-style-type: none"> <li>• NtfsLastAccessUpdatePolicyVolumeSizeThreshold is 0.</li> <li>• The size of the boot volume is &lt;= NtfsLastAccessUpdatePolicyVolumeSizeThreshold in GB.</li> <li>• NtfsLastAccessUpdatePolicyVolumeSizeThreshold is undefined and (prior to Windows 10 v2004) the size of the boot volume is &lt;= 128GB.</li> </ul> <p>On server systems, or client systems where the above conditions do not apply, LastAccessTime updates are always disabled.</p> <p>At system startup, after evaluating the above policy, NTFS will set/clear flag 0x00000001 accordingly to reflect that LastAccessTime updates are disabled/enabled.</p>								
0x80000000	Flags initialized. Indicates NTFS recognizes flags other than 0x00000001. At system startup, if flag 0x80000000 is not set, the system will automatically set flag 0x80000000 and will additionally set flag 0x00000002 (becoming system managed) if flag 0x00000001 was set.

Errata Published*	Description		
2023/01/30	<p>In section 2.4.7, revised behavior notes 97 through 100 to indicate the responses to a -2 value for certain attributes on different file systems.</p> <p>Changed from:</p> <p>&lt;97&gt; Section 2.4.7: The file system updates the values of the <b>LastAccessTime</b>, <b>LastWriteTime</b>, and <b>ChangeTime</b> members as appropriate after an I/O operation is performed on a file. However, a driver or application can request that the file system not update one or more of these members for I/O operations that are performed on the caller's file handle by setting the appropriate members to -1. A driver or application can subsequently request that the file system resume updating one or more of these members for I/O operations that are performed on the caller's file handle by setting the appropriate members to -2. The caller can set one, all, or any other combination of these three members to -1 and/or -2. Only the members that are set to -1 will be unaffected by I/O operations on the file handle; the other members will be updated as appropriate. This behavior is consistent across all file system types. Note that even though -1 and -2 can be used with the <b>CreationTime</b> field, they have no effect because file creation time is never updated in response to file system calls such as read and write.</p> <table border="1"><tr><td>File system</td><td>Support value of -2</td></tr></table>	File system	Support value of -2

## [MS-FSRVP]: File Server Remote VSS Protocol

This topic lists the Errata found in the MS-FSRVP document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

July 18, 2016 - [Download](#)

June 1, 2017 - [Download](#)

## [MS-FSVCA]: File Set Version Comparison Algorithms

**This topic lists the Errata found in the MS-FSVCA document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

## [MS-GPPREF]: Group Policy: Preferences Extension Data Structure

This topic lists the Errata found in [MS-GPPREF] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

September 12, 2018 - [Download](#)

## [MS-GPSB]: Group Policy: Security Protocol Extension

This topic lists the Errata found in [MS-GPSB] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

September 12, 2018 - [Download](#)

## [MS-GPOL]: Group Policy: Core Protocol

**This topic lists the Errata found in [MS-GPOL] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

June 1, 2017 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-GPWL]: Group Policy: Wireless/Wired Protocol Extension

This topic lists the Errata found in [MS-GPWL] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

April 7, 2021 - [Download](#)

## [MS-GSSA]: Generic Security Service Algorithm for Secret Key Transaction Authentication for DNS (GSS-TSIG) Protocol Extension

This topic lists the Errata found in the MS-GSSA document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 1, 2017 - [Download](#)

## [MS-HGSA]: Host Guardian Service: Attestation Protocol

**This topic lists the Errata found in the MS-HGSA document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 1, 2017 - [Download](#)

September 15, 2017 - [Download](#)

September 12, 2018 - [Download](#)

June 24, 2019 - [Download](#)

## [MS-HTTPE]: Hypertext Transfer Protocol (HTTP) Extensions

This topic lists the Errata found in [MS-HTTPE] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

## [MS-HVRS]: Hyper-V Remote Storage Profile

**This topic lists the Errata found in [MS-HVRS] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

March 20, 2017 - [Download](#)

## [MS-ICPR]: ICertPassage Remote Protocol

**This topic lists the Errata found in the MS-ICPR document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

## [MS-IKEE]: Internet Key Exchange Protocol Extensions

**This topic lists the Errata found in the MS-IKEE document since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

Errata Published *	Description		
			1 relationship between this LCID and the user's current default locale name.
	Transient LCIDs<16>	0x3000, 0x3400, 0x3800, 0x3C00, 0x4000, 0x4400, 0x4800, 0x4C00	Some user configurations temporarily associate a locale without a permanent LCID assignment with one of these 8 transient LCIDs. This assignment is transient and it is not guaranteed; it will likely refer to the same locale for the lifetime of the process. However, this assignment will differ for other users on the machine, or other machines, and, as such, is unsuitable for use in protocols or persisted data. This assignment is a temporary 1-to-1 relationship between an LCID and a particular locale name and will round trip until that relationship changes.
	Changed to:		
LOCALE_CUSTOM_USER_DEFAULT<15>	0x0C00		When an LCID without a permanent LCID assignment is also the current user locale, the protocol will respond with LOCALE_CUSTOM_USER_DEFAULT for that locale. This assignment persists until the user changes the locale. Because the meaning changes over time, applications are discouraged from persisting this data. Though this value will likely refer to the same locale for the lifetime of the current process, that is not guaranteed. This assignment is a 1-to-1 relationship between this LCID and the user's current default locale name.
Transient LCIDs<16>	0x2000, 0x2400, 0x2800, 0x2C00, 0x3000, 0x3400, 0x3800, 0x3C00, 0x4000, 0x4400, 0x4800, 0x4C00		Some user configurations temporarily associate a locale without a permanent LCID assignment with one of these 12 transient LCIDs. This assignment is transient and it is not guaranteed; it will likely refer to the same locale for the lifetime of the process. However, this assignment will differ for other users on the machine, or other machines, and, as such, is unsuitable for use in protocols or persisted data. This assignment is a temporary 1-to-1 relationship

## [MS-RDPEGT]: Remote Desktop Protocol Geometry Tracking Virtual Channel Protocol Extension

This topic lists the Errata found in [MS-RDPEGFT] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

June 1, 2017 - [Download](#)

## [MS-RDPEI]: Remote Desktop Protocol: Input Virtual Channel Extension

This topic lists the Errata found in [MS-RDPEI] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

## [MS-RDPELE]: Remote Desktop Protocol: Licensing Extension

**This topic lists the Errata found in [MS-RDPELE] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

September 12, 2018 - [Download](#)

March 4, 2020 - [Download](#)

August 24, 2020 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-RDPEMC]: Remote Desktop Protocol: Multiparty Virtual Channel Extension

This topic lists the Errata found in [MS-RDPEMC] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

## [MS-RDPEMT]: Remote Desktop Protocol: Multitransport Extension

**This topic lists the Errata found in [MS-RDPEMT] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

March 2, 2016 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-RDPEPC]: Remote Desktop Protocol: Print Virtual Channel Extension

This topic lists the Errata found in [MS-RDPEPC] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

June 1, 2017 - [Download](#)

April 7, 2021 - [Download](#)

## [MS-RDPEPNP]: Remote Desktop Protocol: Plug and Play Devices Virtual Channel Extension

This topic lists the Errata found in [MS-RDPEPNP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

## [MS-RDPERP]: Remote Desktop Protocol: Remote Programs Virtual Channel Extension

This topic lists the Errata found in [MS-RDPERP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

## [MS-RDPESC]: Remote Desktop Protocol: Smart Card Virtual Channel Extension

This topic lists the Errata found in [MS-RDPESC] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

October 16, 2015 - [Download](#)

June 30, 2015 - [Download](#)

June 1, 2017 - [Download](#)

## [MS-RDPESP]: Remote Desktop Protocol: Serial and Parallel Port Virtual Channel Extension

This topic lists the Errata found in [MS-RDPESP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

July 18, 2016 - [Download](#)

## [MS-RDPEUDP]: Remote Desktop Protocol: UDP Transport Extension

This topic lists the Errata found in [MS-RDPEUDP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.

Errata are subject to the same terms as the Open Specifications documentation referenced.

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:

March 2, 2016 - [Download](#)

Errata Published*	Description
2023/01/30	<p>In section 2.1.4.3, deleted a sentence asserting that match length checks are performed.</p> <p>Changed from:</p> <p>Note that match distances cannot be larger than 65,535, and match lengths cannot be longer than 65,538. The LZ77 phase is implemented to ensure that match lengths and distances do not exceed these values.</p> <p>Changed to:</p> <p>Note that match distances cannot be larger than 65,535, and match lengths cannot be longer than 65,538.</p> <p>In section 2.2.4, "Processing," clarified the description of processing for decompression.</p> <p>Changed from:</p> <p>During the beginning of processing each block for decompression, an implementation MUST check for EOF. An implementation can do this by comparing the block size against the required space for a Huffman table — if this condition is met and all output has been written, then processing stops and success is returned. Alternately, an implementation can explicitly examine the input buffer using the Huffman table from the previous block.</p> <p>Changed to:</p> <p>During the beginning of processing each block for decompression, an implementation MUST check that the block has sufficient space for a Huffman table — if the block has enough space, then processing continues. If there is not enough space for a Huffman table and all output has been written, then processing stops and success is returned, otherwise an error indicating invalid data is returned.</p> <p>In section 2.2.4, Processing, added terminating conditions to the decompression pseudocode.</p>

Errata Published*	Description
	<p>Changed from:</p> <p>Loop until a decompression terminating condition</p> <p>Build the decoding table</p> <p>CurrentPosition = 256 // start at the end of the Huffman table</p> <p>NextBits = Read16Bits(InputBuffer + CurrentPosition)</p> <p>CurrentPosition += 2</p> <p>Changed to:</p> <p>Loop until a decompression terminating condition</p> <p>If remaining input buffer does not have enough space for a Huffman table</p> <p>If we're at the end of the output buffer</p> <p>Decompression is complete, return success</p> <p>The compressed data is not valid, return error</p> <p>Build the decoding table</p> <p>CurrentPosition = 256 // start at the end of the Huffman table</p> <p>NextBits = Read16Bits(InputBuffer + CurrentPosition)</p> <p>CurrentPosition += 2</p>

## [MS-XCEP]: X.509 Certificate Enrollment Policy Protocol

**This topic lists the Errata found in [MS-XCEP] since it was last published. Since this topic is updated frequently, we recommend that you subscribe to these RSS or Atom feeds to receive update notifications.**

**Errata are subject to the same terms as the Open Specifications documentation referenced.**

No errata are available for the latest version of this Windows Protocols document. To view a PDF file of the errata for the previous versions of this document, see the following ERRATA Archives:
